Mobrey™ Magnetic Horizontal Level Switches

For Liquid Level Alarm and Pump Control

- Ideal for industrial applications such as pump control and high or low alarm duty on tanks and pressure vessels
- Simple, rugged, and reliable. Low cost of ownership
- Direct (side or top) or chamber mounting
- Operates in most liquids
- Variety of switch mechanisms for electrical or pneumatic switching
- ATEX and marine approvals

Magnetic Horizontal Float Switches

High and low alarm application

Measurement principle

Mobrey magnetic horizontal float switches (“float switches”) are ideal for high and low liquid level alarm, and pump control duties.

The float switch is designed to open or close a circuit (“switch”) as a changing liquid level within a vessel passes the level of the float (the Switch Point).

When the process liquid level is below the Switch Point, contacts B-B are made (together) and contacts A-A are open.

When the process liquid level is above the Switch Point, contacts A-A are made (together) and contacts B-B are open.

Benefits of Emerson’s™ Mobrey magnetic float switch technology

- Over 100 years of experience – a proven design
- “Fit and Forget”
– simple, reliable, and cost effective level measurement technology
- Tough, rugged design for long life in aggressive environments
- Operates in almost any liquid at high pressures and temperatures
- Measurement is unaffected by changes in process temperature, dielectric, or the presence of vapors
- Wide range of mounting options and configurations to suit all types of liquid level application and meet site standards

Special features of the Mobrey design

- Magnetically coupled
- No glands or linkages that could cause leaks
- No springs means reduced maintenance
- Snap action switching
- No contact hover or bounce for clean make or break
- Hermetically sealed switch mechanism is available to eliminate freezing and corrosion of contacts and all moving parts

Selecting a float switch

Float switches for general purpose applications

(aluminum bronze wetside) – see [Table 1 on page 4](#) for model codes

- Ideal for industrial applications such as pump control, and high or low alarm duty
- Marine approvals: Lloyds Register of Shipping (LRS), GL, DNV, ABS, BV, RINA, and RMRS

Float switches for general purpose applications

(stainless steel wetside) – see [Table 2 on page 5](#) for model codes

- Marine approvals: Lloyds Register of Shipping (LRS), GL, DNV, ABS, and RMRS

Float switches for hazardous area applications

– see [Table 3 on page 7](#) for model codes

- ATEX/IECEX Zone 1 Gas Group IIC, CSA Class 1: Group CD, Technical Regulation Customs Union (EAC) Flameproof, and Lloyds Register of Shipping (LRS) approvals

Float switches for marine applications

– see [Table 4 on page 9](#) for model codes

- **Submersible** (S03, S163 and S195) or **hoseproof** (S179 and S181)
- **Hazardous Area Submersible/Hoseproof** (S183, S187, and S189), designed for submersion in vented tanks and mounting from the outside of a tank
- Aluminum bronze or stainless steel enclosure and wetside
- May be submerged to 100 ft. (30 m) head of water (IP68)
- Hazardous area ATEX approval for Zone 1, Gas Group IIC
- Marine approvals: Lloyds Register of Shipping (LRS), GL, DNV, ABS, BV, RINA, and RMRS

1. The maximum process temperature is dependent on the flange (head), switch mechanism, cable (if fitted), and float options chosen. See [Table 5 on page 10](#) for the IP rating and maximum process temperature.
2. See [“Switch mechanism specifications” on page 17](#) for information about all switch mechanisms.
3. Not available for stainless steel enclosure and wet-side models S163 and S181.
4. See [Table 14 on page 21](#) for a detailed comparison of the float types listed here.
5. Refer to pages 23, 24, and 25 for technical float details and length options. See [“Nozzle and stud lengths” on page -23](#) for stud lengths.
6. A silicone rubber gaiter is supplied with the 316 SST shroud.
7. Shrouded floats for stainless steel switches S163 and S181 are available on request (contact an Emerson representative for information).

1. The maximum process temperature is dependent on the Flange (Head), Switch mechanism, and Float options chosen.
2. See [page 16](#) for cable specification.
3. S179 and S181 may be submersed to 100 ft. (30 m) head of water with temperatures between 34 and 212 °F (1 and 100 °C). Fitting and testing of customer supplied cable and cable gland is the customer's responsibility. The cable and cable gland may limit the temperature further.
4. The maximum process temperature for submersed S187 is 176 °F/80 °C (for non-approved) or 122 °F/50 °C (for ATEX approved).
5. S189 may be submersed to 100 ft. (30 m) head of water with temperatures between 34 and 140 °F (1 and 60 °C). Fitting and testing of customer supplied cable and cable gland is the customer's responsibility. The cable and cable gland may limit the temperature further.

Float chambers

Float chambers are used to facilitate the external mounting of the float switch onto a tank or pressure vessel, particularly where space inside the vessel is restricted or where the control must be isolated for routine maintenance whilst the plant is in operation. A wide range of **cast** or **fabricated** chambers is available. Exotic materials are also available. Process connections may be specified as top-and-bottom or side-and-side, and can be flanged, screwed or butt welded in a choice of sizes to suit most plant installations. Please contact Emerson for further information.

Specifications

Material selection

Emerson provides a variety of products with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser's sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product, materials, options and components for the particular application. Emerson is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration or materials of construction selected.

Switch mechanism specifications

Electrical Types D and P

Electrical Types D6 and P6

Electrical Types H6 and B6

Pneumatic Types AP and AM

Electrical switch mechanisms

Type D

- For alternative make and break circuits
- Function: 2 independent single pole single throw contact sets and “Snap-Action”
- May be wired S.P.C.O. on site

Type D6

- For switching two independent circuits.
- Function: Double pole change over (2 independent circuits) and “Snap-Action”

Types P and P6

- As types D and D6, but with gold-plated contacts for switching low power (e.g. intrinsically safe) electrical circuits

Type H6

- For use in corrosive area and/or low temperature applications
- As type D6, but with gold-plated contacts and all moving parts are housed in an inert gas-filled hermetically sealed enclosure

Type B6

- For use in Zone 2 Hazardous Areas
- As type H6, but coded ATEX II 3 G, EExnC IIC T6
–76 °F (–60 °C) <Ta < 140 °F (60 °C)
- For Technical Regulation Customs Union (EAC) approvals, contact an Emerson representative for the latest information

Pneumatic switch mechanisms

Type AP

- For switching air circuits
- Function: Change over
- Air pressure:
 - Maximum air pressure through valve: 100 psi (7 bar).
 - Maximum air flow through valve: 66 litres/minute at 100 psi (7 bar). Air must be clean and dry
- Nominal leakage rate of 0.2%
- Connections: Brass compression couplings to suit 0.24-in. (6 mm) copper or nylon pipe, coupling thread ¼-in. BSP.

Type AM

- For modulating air controlled circuits
- Function: Continuous modulation
- Air pressure
 - Max. air pressure through valve: 20 psi (1.4 bar).
 - Modulation: linear: 0 to 20 psi (0 to 1.4 bar).
 - 2.9 psi (0.2 bar) to 20 psi (1.4 bar) available on request
- Temperature:
 - Medium: 34 to 752 °F (1 to 400 °C)
 - Ambient: 34 to 140 °F (1 to 60 °C)
 - A lower ambient temperature can be tolerated if the air supply is 100% dry

Horizontal F68 pump control and alarm float

Note: Dimensions are in inches (mm).

Note

Switches fitted with the F68/+ type float may be adjusted on site to meet pump control differentials. The float is available as F68/1 or F68/4. The F68/4 has pre-drilled holes along the rod to allow the user to achieve the /2 and /3 differentials in Table 17. Full details of the operating levels and differentials are in the product manual (Document Number M310).

1. These dimensions in inches (mm) are approximate for cold water and will vary for liquids with a different specific gravity (SG.)

Vertical F21 pump control and alarm float

Note: See Table 18 for dimensions S and T.

Note

Float assembly must be fitted from inside if for use in a vessel, or complete switch and float assembly may be mounted on a suitable bracket or manhole cover.

Float rod lengths available:

F21/1 5 ft. (1524 mm)

F21/2 10 ft. (3048 mm)

F21/3 15 ft. (4570 mm) maximum

Float rods may be cut to length on site and switches set to operate at required level in either pump control or alarm mode by following the supplied setting instructions.

Cranked arm floats F104

Note: See Table 19 or Table 20 for dimensions in mm.

Horizontally mounted F104/* float

A plus B must not exceed 750 mm. A and B should each be equal to or greater than 75 mm, unless it is a straight arm where A is 0 mm (right).

To order, specify the F104 float with these details:

1. A and B (*this page*) or V and W (*next page*) dimensions.
(For a straight arm float, state only the 'B' dimension).
2. Liquid in contact.
3. Specific Gravity (SG) of liquid.
4. Magnetic switch head type number (e.g. S01DB/F)
5. State land or marine application.
