# Fan/Damper Actuators with Optional FOUNDATION™ fieldbus Communications

- Combines the power and reliability of the Hagan Pneumatic Drive with the accuracy and features of the Fisher DVC5000/6000 Digital Valve Controller
- Integral I/P: FOUNDATION™ fieldbus input or 4-20mA HART® input
- Reliable, closed loop positioning
- Double acting piston – no vanes
- Optional “fail-in-place” upon loss of plant air
- Manual operator
- ValveLink Diagnostics/AMS
- Suitable for hazardous area service; explosion-proof, flameproof or intrinsically safe

## Product description

Hagan Pneumatic Power Positioners have defined the standard of excellence in fan and damper actuation for more than 70 years.

These actuators convert the linear motion from a pneumatic piston into an 80° rotation of a drive arm. With few moving parts, the pneumatic power positioner remains the simplest, most reliable and most cost-effective method of actuation. Torque ranges are offered from 400 ft.-lbs to 4,600 ft.-lbs.

The PowerVUE design uses the same rugged Hagan actuator and frame construction, combined with the accuracy and reliability of the Fisher FieldVUE DVC5000/6000 Digital Valve Controller.

The DVC5000 controller, using the HART or FOUNDATION fieldbus communications protocols, gives easy access to information that is critical to process operation.

The controller uses feedback from the actuator travel position to diagnose not only the instrument, but the actuator as well.

The information from the DVC5000/6000 can be integrated into control systems or be received for a single loop.

These instruments use two-wire loop power for low-cost replacement of existing instruments. The two-wire design avoids cost of separate power and signal wiring.

Self-diagnostic capabilities allow you to check fan/damper actuator performance in place. You can compare the present signature (load, friction, etc.) against stored signatures to discover performance changes before they cause problems.

Field maintenance of these instruments is easy. Repair consists of quick replacement of a single master module without disconnecting wires or tubing. Troubleshooting of the master module is fast and easy in the instrument shop.

## Applications

Fan/Damper actuation for:

- Utilities
- Steel mills
- Refineries
- Pulp and paper
- Wastewater (aeration blowers)

## Theory of operation

Traditional positioners use a mechanical force/balance concept, whereby a pneumatic input signal forces a diaphragm down, actuating a valve which ports air into one side of a piston and vents the other side. A feedback spring provides a counterbalancing force as the actuator approaches setpoint.

Mechanical positioners have worked well for many years, but are subject to sticking as mechanical components become soiled, resulting in a situation where the actuator “hunts” for the proper position. The process variable is always above or below setpoint, providing poor control that costs significant money and causes excessive wear on the actuator/linkage/dampers system.

The FieldVUE DVC5000/6000 Digital Valve Controller directly receives a 4-20 mA or fieldbus input signal. An independent feedback transducer provides an actuator position input, ensuring that the PowerVUE drive always moves to the setpoint demanded by the control system. Fieldbus versions of the DVC5000/6000 also offer PID loop control capability.

## Options

**Air Lock** - mechanically locks the drive in place upon the loss of plant air.

**Manual Operator** - handwheel/lever arm permits manual adjustment of drive.

**Limit Switches** - proof of position for purge/lightoff conditions may be accomplished by traditional mechanical microswitches.

**Electric Position Transmitter** - provides a 4-20 mA feedback signal representing actuator position. (HART versions only.)

## Digital communications

### 4-20mA HART versions:

All operator information for setup and diagnostics is transmitted digitally via HART communications. A Rosemount 375 Hand-held or similar communicator may be used or a laptop computer with ValveLink Software. Emerson’s AMS offers the ValveLink software as an optional “snap-on” application. Instruments may be accessed individually or multiplexed through an “interchange” unit, providing continuous access to any number of Emerson’s instruments.

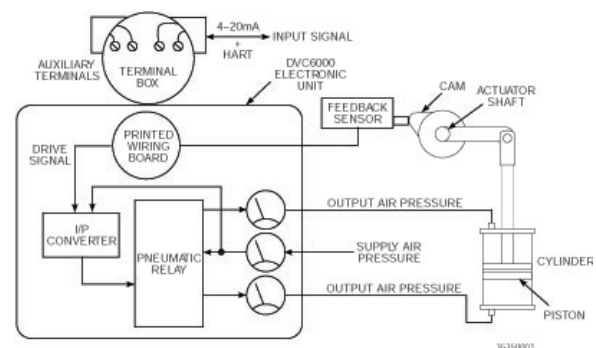

### FOUNDATION fieldbus versions:

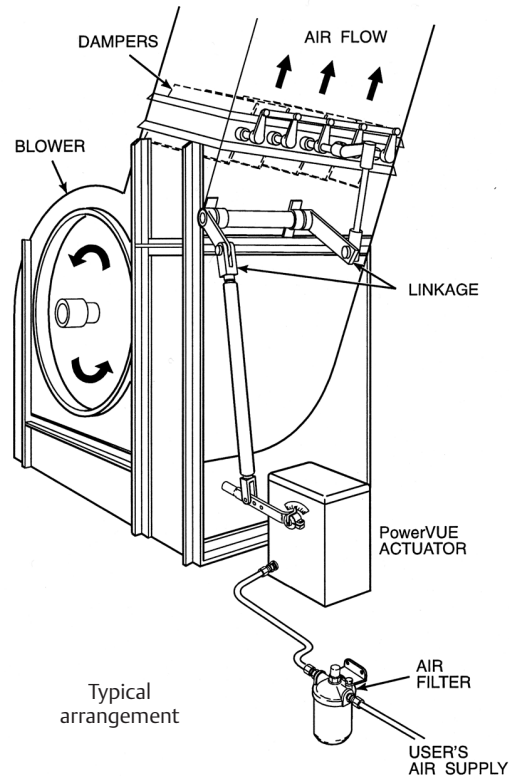

All operator interface is via the host computer console.

A hand-held device is available.

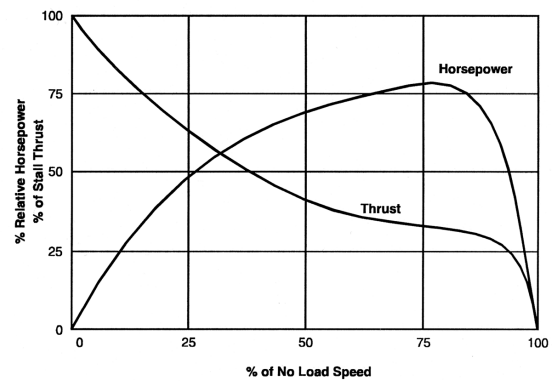

## Valvelink advanced diagnostics

In addition to the standard features, advanced diagnostic features provide additional capabilities to diagnose problems with the DVC5000, the actuator, and even in the damper/linkage systems. Actuator can be tested as it is put into service, and this data compared to an “as found” condition after years in service. Maintenance can be scheduled based upon actual need vs. traditional “time in service” criteria.

## Performance Curves

Set of characteristic curves for a typical air-operated power cylinder. Piston displacement and time are plotted for suddenly applied full-range positioning inputs to the cylinder. The linear sections of the curves correspond to steady speed.

A typical cylinder-thrust vs. speed characteristic. The curve of relative horsepower output is also shown.

Note: Stall torques are specified for all models. Emerson recommends that a 60% factor be applied to ensure fast control response. Rosemount Analytical power positioners are not recommended for reversing loads or heavy mass loads.

# 4 X 5 torque type floor mounted features, accessories and options

## Features

- Digitally-controlled positioner system with HART® or FOUNDATION™ fieldbus communications
- Repeatability better than  $\pm 0.5\%$
- Direct 4-20 mA signal input – integral I/P
- Characterizable
- Reverse or direct acting
- Standard rotation – counterclockwise

## Accessories

- Clevis and pin are included P/N 174469
- Air filter/regulator included P/N 4505C21G03

## Options

- Mechanical air lock upon loss of plant air supply
- 4-20 mA position feedback signal – 4-20 mA HART versions only
- Manual lock
- Limit switches
- Minimum limit stop

Drawings are for reference purposes only, and Rosemount Analytical Inc. does not warrant the accuracy of the dimensions herein.

Dimensions in inches with millimeters in parentheses.

# 4 X 5 torque type floor mounted specifications<sup>1</sup>

## Specifications<sup>1</sup>

### Actuator

#### Repeatability

±0.5% of full stroke or better

#### No load full stroke time

3 sec.

#### Stall torque

400 ft.-lbs. (542 N • m) with 100 psig (689 kPa gage) air supply

#### Maximum friction load

50% of control torque.

#### Maximum weight load

140 ft.-lbs. (189 N • m)

#### Maximum allowable cylinder air pressure

100 psig (689 kPa gage)

#### Power air consumption

10 scfm steady state.

#### Stroke length

5 in. (127 mm), 80° rotation.

## Physical characteristics

#### Weight

80 lbs. (36 kg) typical

#### Air supply and signal air input fittings

1/4 inch NPT female connections

## Environmental requirements actuator

#### Ambient temperature

##### Without heater:

40° to 122°F (4,44° to 50°C), 140°F (60°C) with increased maintenance

##### With heater

-10° to 122°F (-23,3° to 50°C) 140°F (60°C) with increased maintenance

#### Relative humidity

Operable up to 100% RH

## Electronics

See DVC5000/6000 specifications

## Pneumatic

#### Operating air supply pressure

45 to 100 psig (310 to 689 kPa gage)

#### Recommended air supply pressure

100 psig (689 kPa gage)

#### Electrical Optional heater power consumption

150 watts

## Signal requirements

#### Control signal inputs

4-20 mA signal with HART® or FOUNDATION™ fieldbus

<sup>1</sup> Specifications are subject to change without notification. Our policy is one of continuous improvement, and we reserve the right to change specifications.

# DVC6000 series Specifications<sup>1</sup>

## Available configurations

### DVC6010

Sliding stem applications

### DVC6020

Rotary applications and long-stroke sliding-stem applications

### DVC6030

Quarter-turn rotary applications

## Input signal<sup>1</sup>

### Analog Input Signal

4-20 mA dc, nominal; split ranging available

### Minimum Voltage Available at Instrument Terminals

11 VDC for analog control (see instrument instruction manual for details)

### Minimum Control Current

4.0 mA

### Minimum Current without Microprocessor Restart

3.5 mA

### Maximum Voltage

30 VDC

### Overcurrent Protection

Input circuitry limits current to prevent internal damage

### Reverse Polarity Protection

No damage occurs from reversal of loop output

## Output signal<sup>1</sup>

### Ranges

Pneumatic signal as required by the actuator, up to 95% of supply pressure

### Minimum Span

6 psig (0.4 bar)

### Maximum Span

140 psig (9.5 bar)

### Action

Double, single direct, and single reverse

## Supply pressure

### Minimum and Recommended

5 psig (0.3 bar) higher than maximum actuator requirements

### Maximum

150 psig (10.2 bar) or maximum pressure rating of the actuator, whichever is lower

## Steady-state air consumption<sup>1 2 3</sup>

### At 20 psig (1.4 bar) supply pressure

Less than 11 scfh (0.3 normal m<sup>3</sup>/hr.)

### At 100 psig (6.9 bar) supply pressure

Less than 45 scfh (1.2 normal m<sup>3</sup>/hr.)

### Xi Temp. limits as measured inside the electronics housing

-20° to 70°C (-4° to 158°F)

## Maximum output capacity<sup>2 3</sup>

### At 20 psig (1.4 bar) supply pressure

465 scfh (12.5 normal m<sup>3</sup>/hr.)

### At 100 psig (6.9 bar) supply pressure

1570 scfh (42.1 normal m<sup>3</sup>/hr.)

## Independent linearity<sup>1</sup>

±0.5% of output span

## Electrical classification

### Hazardous Area

FM, CSA, CENELEC

Other approvals are pending from certifying agencies

### Electrical Housing

Designed to meet NEMA 4X, IEC 529 IP 65

## Connections

### Supply Pressure

1/4-inch NPT female and integral pad for mounting  
67 CFR regulator

### Output Pressure

1/4-inch NPT female

### Tubing

3/8-inch metal, recommended

### Vent (pipe-away)

1/4-inch NPT female

### Electrical

1/2-inch NPT female conduit connection,  
M20 adaptor optional

## DVC6000 series Specifications<sup>1</sup> continued

### Operating ambient temperature limits (standard)

-40° to 85°C (-40° to 185°F)

### Construction materials

#### Housing, module base and terminal box

ANSI B360.0 low copper aluminum alloy

#### Cover

Valox

#### Elastomers

Nitrile (standard), or Fluorelastomer (optional)

### Stem travel

#### DVC6010

0 to 102 mm (8-1/8 inches) maximum

0 to 19 mm (3/4 inches) minimum

#### DVC6020

0 to 22 inches

### Shaft rotation (DVC6020 and DVC6030)

0 to 90 degrees maximum.

### Mounting

Designed for direct actuator mounting. For weatherproof housing capability, the instrument must be mounted upright to allow the vent to drain.

### Weight

3.5 kg (7.7 lbs.)

### Options

Supply and output pressure gauges or tire valves  
Integrally mounted filter regulator

<sup>1</sup> These terms are defined in ISA Standard S51.1-1979

<sup>2</sup> Normal m<sup>3</sup>/hr. – Normal cubic meters per hour at 0°C and 1.01325 bar, absolute; Scfh-Standard cubic feet per hour at 80°F and 14.7 psia

<sup>3</sup> Values at 1.4 bar (20 psig) based on a single-acting relay; values at 6.8 bar (100 psig) based on double-acting relay.

Emerson Process Management has satisfied all obligations coming from the European legislation to harmonize the product requirements in Europe. The PowerVUE actuator is a subcomponent of an actuating system, including user-provided items such as linkages, bearings, and dampers. The user must ensure that the entire actuating system is in conformity with the provisions of the European Machinery Directive EC Machinery Directive 89/392/EEC, as amended by directive 91/368/EEC and Directive 93/44/EEC.

# PowerVue field retrofit kits for existing Hagan power positioners

## Description

An existing Hagan torque-type power positioner can be retrofitted with the PowerVUE system in a few hours.

The PowerVUE system eliminates most maintenance requirements associated with mechanical “force balance” positioning systems, based on pilot valves.

The Hagan PowerVUE retrofit package includes all mounting brackets, hardware, and pneumatic tubing needed to upgrade an existing Hagan Pneumatic Power Positioner. No drilling or tapping of holes is required. (The positioning system mounts directly to the frame, eliminating the need for connecting linkages.)

Note: Retrofit kits are not offered for the Hagan thrust-type units, or the Econotorque Models.

## Features

- Digitally-controlled positioner system
- Factory designed mounting
- Direct 4-20 mA signal input – integral I/P
- Characterizable
- Air lock upon loss of plant air supply
- Reverse or direct acting
- ValveLink diagnostics

## Options

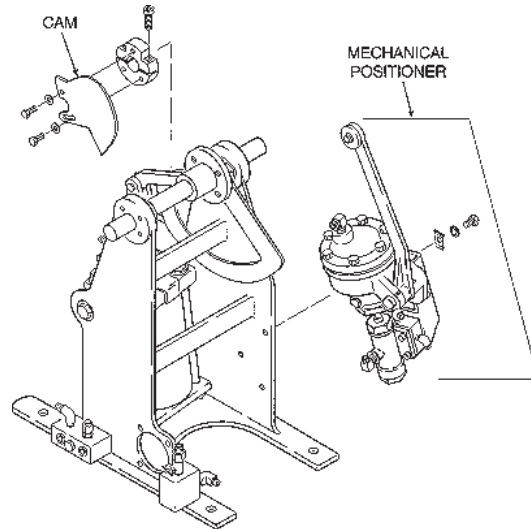

- 4-20 mA position feedback signal
- 2 position limit contacts available

Field Retrofit Kits are available for the 4 x 5 and 8 x 14 torque-type models:

PP405TR	4” x 5”	Cylinder
452167	8” x 14”	Cylinder
457696	8” x 14”	Cylinder
452593	8” x 14”	Cylinder
443700	8” x 14”	Cylinder
457031	8” x 14”	Cylinder

## Ease of retrofit

(4 x 5 Unit Pictured)

Step #1 – remove existing positioning system

Step #2 – install PowerVue DVC5000 components

## Ordering information
